

VPH-PL PHOTO POUCH CONFIGURATION

The VPH harness will allow you to comfortably store and easily access all your lenses, flash and camera bodies in photo configuration. This modular system lets you carry as many or as little pouches either on the belt or with the added harness for extra support. You can connect up to 6 pouches recommended anywhere on your belt for various carrying possibilities. Pouches for full size DSLR bodies, professional flash, and many different sizes of lenses are available for purchase separately to match your kit.

FEATURES

Adjustable belt and harness for ultimate comfort.
Modular system lets you carry the exact pouches you need for your exact equipment. (pouches sold separately)
Wear the belt separately or together with the harness.

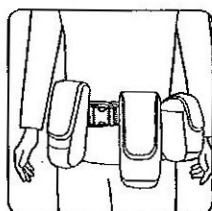

Name: VPH-PL Order code: KT PL-VPH

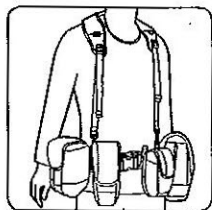

VPH-PL	Dimensions	
Minimum girth	33.9"	86 cm
Maximum girth	43"	109 cm

*Dimensions measures belt only on each

The VPH gives you the option to either use the full harness with both the belt as well as the shoulder harness, or to use the belt to be used individually.

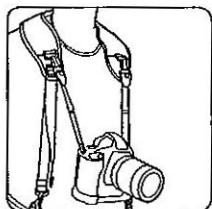

Belt with Pouches

Full harness with pouches

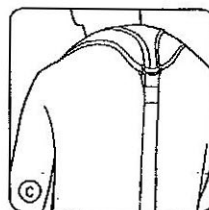

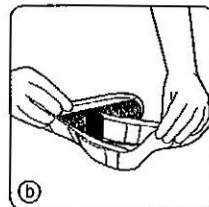

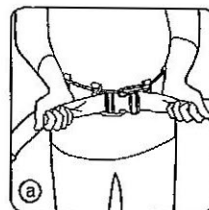

Shoot quickly and take the weight of your camera off your neck with the use of the special camera straps.

BELT AND HARNESS

ATTACHMENT STAGES:

- Start by quickly trying on the belt and buckling. You may find that you need to lengthen or shorten.
- If no adjustment is needed, simply clip the main front buckle and tighten by pulling the ends of the strap to your sides. (see fig. a)
- To adjust the length of the belt, take the belt off and open each end of the inside of the belt. You can now adjust each end using the hook and loop to match your needed waist size. Widening the belt will reveal an extra pouch connection, (provided you are able to wear the belt comfortably). (see fig. b)
- Close the inside large hook and loop connection on the inside of the belt

To properly adjust and install the shoulder harness:

- Follow the steps above first to adjust the belt.
- The harness has an adjustable rear connection as well as two frontal connections with 2 different buckle options.
- Put on the belt and shoulder harness, making sure that the rear connection is attached and the two frontal clips are attached with the corresponding D-rings. If the height of the harness needs adjustment, take off and adjust the back hook and loop connection to the desired length. (see fig. c)
- Put the harness back on. You can clip the front two attachment buckles to either the inside or outside D-rings to your preference. (see fig. d)
- Pull the excess straps of the shoulder harness to tighten comfortably on your body. (see fig. e)
